

Structural Engineer (Mid-Senior Level)

Gandy and Roberts Consulting Engineers provides quality innovative and cost-effective structural designs for commercial, institutional and domestic building projects throughout Tasmania. This is supported by an experienced civil and hydraulic engineering team, as well as BIM consulting.

Gandy and Roberts is linking traditional and proven engineering concepts with innovative technologies to meet the demands of builders, architects and designers in today's very competitive building industry.

We work hard to maintain a healthy, positive attitude to our work, and to ensure that all of our staff continue to develop and reach their career goals.

We have a permanent full-time position available for a structural engineer in Hobart – one of Australia's most liveable cities and surrounds. Home-office based work from Launceston/Devonport/Burnie area will be considered.

The successful applicant will hold a Bachelor or Master of Civil Engineering and have 5+ years of post-graduate work experience as a structural engineer.

The position involves undertaking or assisting with the design, documentation and site supervision of a range of building developments. You will need to have a desire to create economic designs with a high level of documentation.

Applying structural engineering concepts and relevant software confidently is a prerequisite to be successful in this role. Any additional skills and experience in civil/hydraulic engineering or BIM are desirable.

Attractive remuneration commensurate with level of experience will be negotiated with the successful applicant. Due to COVID-19 travel restrictions, only applicants with Australian citizenship or visa holders currently residing in Australia will be considered.
